Publisher Add-On for NavisWorks

Publisher Add-On software automates the publishing of Autodesk NavisWorks project files.

The Publisher Add-On is used by the project coordinator to make the publishing of Navisworks models automatic by using the File Scheduler-function or the Autodetectfunction. The Autodetect feature publishes automatically every time a new or modified CAD-model appears in the project folder.

The Publisher Add-On also observes the publishing attributes used in NavisWorks

It works independently from NavisWorks,so there is no need to run NavisWorks when using Publisher Add-On

License includes a standalone program with Windows GUI and a console program GUI.
